

## Kurulum Anlatimlari > Bahamut Kurulumu

Oncelikle Shellimize login oluyoruz..

Hemen bahamut dosyalari icin bi klasor olusturuyoruz..

```
[user@IRCTurk user]$ mkdir ircd
```

Bu komut ile ircd/ klasoru olusturduk..Simdilik buna dokunmuyoruz bunu ilerisi icin kullanicaz..

Simdi Bahamut1.4.35 i shell hesabimiza indiriyoruz..

```
[user@IRCTurk user]$ wget http://bahamut.dal.net/ircd-qa/bahamut-1.4.35-release.tar.gz
```

Artik bahamut1.4.25 hesabimizda simdi sira zipli dosyayi acmaya geldi..

```
[user@IRCTurk user]$ tar zxvf bahamut-1.4.35-release.tar.gz
```

yaziyoruz..Simdi zip dosyasi acildi vede shellinizde bahamut-release/ adinda bi klasor olustu..

simdi o klasorun icine giriyoruz..

```
[user@IRCTurk user]$ cd bahamut-release
```

Simdi bahamut klasorunun icindeyiz vede kurma islemine baslayabiliriz..

```
[user@IRCTurk user]$ ./configure
```

bu islem bittikten sonra

```
[user@IRCTurk user]$ ./config
```

yaziyoruz..Bu islem sirasinda kurulum bize sorular sorucaktir..

Sirasiyla sorulara bakalim...

What are the maximum File Descriptors that the IRCD can use?

```
[1024] ->
```

Sadece ENTER tusuna basin..

What are the maximum number of Users you

intend to allow on your IRC server?

Note that you can now change this number

on the fly with with /set command.

```
[1000] ->
```

Gene Entera Basin..

What is the maximum connection buffer amount?

Note, this CANNOT exceed the number of file descriptors

minus the maximum clients.

```
[24] ->
```

Entera basin..

What directory are all the server configuration files in?

Note, this directory name needs to end with a /

```
[/home/Stonkeep/bahamut] ->
```

kurulumu baslamadan once yaptigimiz islemi hatirlatin mkdir ircd yazmistik..Simdi burada oranin tam yolunu vericegiz vede bahamutu ircd/ klasorunun icine kuracagiz..

cevap olarak buraya /home/kullaniciadi/ircd yaziyoruz..

kullanici adi olarak shellinize login olarak kullandiginiz username i kullanin..Vede onceden ircd/ klasorunu yaratmayi unutmayin..

What is the explicit path to where the ircd binary will be installed? This should point to a file, not a directory.

```
[/home/Stonkeep/bahamut] ->
```

Bu soruyada /home/kullaniciadi/ircd/ircd olarak cevap veriyoruz..

Dikkat sakin sonuna '/' isareti koymayin..

Would you like to see when a /stats is requested?

This only applys for +y users.

```
[Yes] ->
```

ENTERlayin..

There are clients out there ignoring the MOTD numeric, so

there is no point forcing MOTD on connecting clients. Instead of sending the MOTD, enabling this will just send a short notice to the connecting client asking them to read the motd.  
To change the notice, you may edit ircd.smotd in the same directory as your ircd.motd file.

[Yes] ->

ENTERlayin..

Would you like Connecting Clients to be automatically set +i?

[Yes] ->

ENTERlayin..

Would you like to compile as a HUB?

[No] ->

Eger baska bir servera link atmicaksaniz Yes diyin yoksa ENTERlayin..

Would you like connecting users to be sent a notice regarding wingate and socks scans? This must be defined if you intend to run your server on DALnet.

[Yes] ->

ENTERlayin..

What host does your wingate bot run from?

This is only a default and may be overridden with a T: line

See doc/example.conf for more information on T: lines

[some.bot.host] ->

proxy.serverinizismi.net olarak yazin..

What address can users affected by k-lines ask for help?

This is displayed to all LOCALLY k-lined users upon connect.

This should be the address of the local administrator.

This should NOT be kline@dal.net!

[admin@poorly.configured.server.com] ->

kline larda kullanilacak adres..Admin adresinizi girmeniz yeterli olucaktir..

What address can users affected by autokills ask for help?

This is displayed to all globally autokilled users upon connect.

This should be the address of the network administrator.

On dalnet, this should be kline@dal.net.

[admin@poorly.configured.server.com] ->

buna akilllerin icin kullanilacak adres yukaridaki ile ayni adresi girin...

Would you like to use syslog for server logging?

This is STRONGLY recommended, many errors can be caught by syslog.

[No] ->

YES diyip ENTERlayin..

What sendq length do you wish to have?

[5050000] ->

ENTERlayin..

What size of a bufferpool do you wish to have?

A bufferpool is a total of ALL sendq\'s in use

[(4 \* MAXSENDQLENGTH)] ->

ENTERlayin...

Do you want your server to hide U:lined servers in a /links?

If you are planning to link to DALnet, this MUST be defined.

[Yes] ->

ENTERlayin..

Do you want to use the poll system call?

If you are on a solaris machine, this is mandatory.

Linux machines using a kernel older than 2.4 should use select.

Poll works nicely on freebsd machines.  
Select is more economical for small networks.

[Yes] ->

ENTERlayin..

If you have network services and would like to make use of the built in secure services aliasing features, type in the name of your network services server here. If you are a DALnet admin, you would type in 'services.dal.net' below.

[services.dal.net] ->

Servislerinizin Ismini yazin.. Services.serveriniz.net gibi..

What is the maximum number of channels a user should be able to join?

[10] ->

Bir kullanıcı en fazla kaç kullanıcı girebilir.. Tavsiye: 15

Would you like to encrypt oper passwords in O:lines?

[No] ->

ircd.conf daki O:line(Oper şifresi)şifrelenmiş mi yoksa normal yazımı olacak..Yes derseniz şifre yapmak için tools/ klasoru altındaki mkpasswd u kullanmanız gereklidir.. Normal şifreleme için ENTERa basın..

Would you like to enable connection-throttling code?

[Yes] ->

ENTERlayin..

Evetttt bu bölümde bitti.Simdi sıra dosyaları sisteminiz için uygun hale getirmekte..

[user@IRCTurk user]\$ make

[user@IRCTurk user]\$ make install

yazarak bahamut kurulumunu tamamliyoruz..

Eğer herşeyi doğru yaptıysanız ircd.conf vede ./ircd dosyalarınız /home/kullaniciadi/ircd klasorunun icinde olacaktır..

[user@IRCTurk user]\$ cd

[user@IRCTurk user]\$ cd ircd

sizi direkman bu klasore goturucektir..

Bundan sonra yapmanız gereken şey ircd.conf u editlemek vede ./ircd komutu ile serverinizi çalıştırmak...

Kolay Gelsin...
